receptor from the domestic turkey (Meleagris gallopavo).";
Submitted (MAR-1998) to the EMBL/Genbank/DDBJ databases.
-!- FUNCTION: This is one of the five types (DI to DS) of receptors
for dopamine. The activity of this receptor is mediated by G
for dopamine inhibit adennylyl cyclase (By similarity).
-!- SUBCELULIAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

Proc. Natl. Acad. Sci. U.S.A. 96:5173-5176 (1999).
-!- FUNCTION: This is one of the five types (D1 to D5) of refor dopamine. The activity of this receptor is mediated large and which inhibit adenylyl cyclase.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Itckawa M., Arinami T., Futamura N., Hamaguchi H., Toru M.; "A structural polymorphism of human dopamine D2 receptor, D2 (Ser311->Cys).";

"Dopamine Teceptor D2 (DRD2) gene in Pan troglodytes.";

"In the first of the EMBL/GenBank/DDBJ databases.

"FUNCTION: This is one of the five types (DI to D5) of receptors for dopamine. The activity of this receptor is mediated by G proteins which inhibit adenylyl cyclase (By similarity).

"SUBCELLULAR LOCATION: Integral membrane protein."

"SUBCELLULAR LOCATION: Integral membrane protein."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            7 (POTENTIAL).

Neurochem. 65:2287-2292 (1995).

-!- FUNCTION: This alpha-adrenergic receptor mediates its action by association with G proteins that activate a phosphatidylinositol-calcium second messenger system. Its effect is mediated by G(q) and G(11) proteins.

"CAMP responsive element mediated regulation of the gene
transcription of the alpha 1B adrenergic receptor by thyrotropin.";

J. Clin. Invest. 94:2245-2254 (1994).

I. FUNCTION: This alpha-adrenergic receptor mediates its action by
association with G proteins that activate a phosphatidylinositol-
calcium second messenger system.

SUBGELLUJAR LOCATION: Integral membrane protein.

SUBGELLUJAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

Synthesis and dopamine Dz receptor binding."; J. Med. Chem. 38:2231-2255(1995).
-!- FUNCTION: This is one of the five types (D1 to D5) of receptors for dopamine. The activity of this receptor is mediated by G proteins which inhibit adenylyl cyclase.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          7 (POTENTIAL).

--- FUNCTION: This alpha-adrenergic receptor mediates its action by association with G proteins that activate a phosphatidylinositol-calcium second messenger system.
--- SUBCELLULAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (POTENTIAL) (POTENTIAL)

-!- FUNCTION: This is one of the five types (D1 to D5) for dopamine. The activity of this receptor is med proteins which inhibit adenylyl cyclase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MUTAGENESIS OF SER-193; SER-194; SER-197 AND SER-420

Schwinn D.A., Cotecchia S., Lorenz W., Caron M.G., Lefkowitz R.J.;
"The alpha 1C-adrenergic receptor a new member in the alpha 1-
adrenergic receptor family.";
Trans. Assoc. Am. Physicians 103:112-118(1990).
-!- FUNCTION: This alpha-adrenergic receptor mediates its action by
association with G proteins that activate a phosphatidylinosicol-
calcium second messenger system. Its effect is mediated by G(q)
and G(11) proteins.
-!- SUBCELELULAR LOCATION: Integral membrane protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 97
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SVLGYRYVAVSWGVVVAVTG-----TVGNVLTLLALAIQPKLRTRFNLLIANLTLAD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -!- SUBCELLULAR LÓCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                               Vanden Broeck J.J.M.;
Vanden Broeck J.J.M.;
Submitted (NOV-1992) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: G-protein coupled receptor for tyramine, a known neurotransmitter and neuromodulator and direct precursor of octopamine (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  7 (POTENTIAL).
